Centralized Oil Lubricator

Description

CAUTION

These lubricators are to be used with mineral and synthetic oils. The use of alternate products may cause damage to components.

It is mandatory to ensure aerosol is delivered to the machine component prior to machine startup. Damage to component(s) can occur.

The lubricators in the 3942 and 3943 series are either basic models or plate mounted.

Basic Lubricator

The basic lubricator models require additional accessories prior to operation.

The lubricators in this series can contain either a 1.0 or a 2.3 cfm (28 or 65 l/m) nozzle assembly. Additional models are created by including a 120 V ac oil heater. See **Figure 1**.

Plate Mounted Lubricator

All of the basic models can be plate mounted. These models include a filter/regulator and can contain a 120 V ac solenoid valve. See **Figure 1**.

Basic Lubricator

The basic lubricator is comprised of the following components:

- head assembly
- oil adjustment screw
- loader fitting (for filling)
- pressure relief valve
- nozzle and baffle assembly
- oil inlet screen and pickup tube
- one-gallon (4 liter) reservoir
- low-level switch
- oil heater (optional)

Wiring and Installation

A wiring diagram mounts on the underneath side of Cover (20) for systems that include the low-level switch and/or the oil heater. See **Figure 3**.

Refer to Service Guide SER **COLS** for details on the installation of these lubricators.

Operation

These lubricators mix oil with compressed air to create a fine aerosol.

The amount of aerosol dispensed is dependent on the following. The:

- size of the nozzle
- setting of the adjustment screw
- air pressure setting

120 V ac Solenoid Valve

The 120 V ac solenoid valve on the plate mounted lubricator functions as an automatic on/off switch.

Refer to Service Guide SER **COLS** for further details on lubricator operation.

Overhaul

NOTE: Lubricate O-Rings **24** and **27** with clean oil prior to installation. See **Figure 3**.
